- ◆ **2D / 3D Graphic Accelerators**
- ◆ **Two Bidirectional RS-232**
- ◆ **Two IR, Relays, I/O for future use**
- ◆ **Stereo Line In / Out**
- ◆ **Fits in 2 Gang Electrical Box or mounts under tables, behind displays, and in cabinets.**
- ◆ **Low Power Consumption**

Made in the USA

QXP-2-IPX Rear

The QXP-2-IPX is an embedded Linux Control Server to be used with the IPX Series 10G 4K streaming transceivers. The QXP-2-IPX simplifies control of the IPX-TC1 and IPX-TCW3 by centralizing all commands to a single device. By utilizing Telnet, all IPX devices on the network can be controlled from a single access point. Since the QXP-2-IPX is embedded there is no configuration for the device other than setting its IP Address and you are ready to go. Connect an HDMI monitor, keyboard, and mouse to access the desktop and use a simple Linux PC interface.

The QXP-2-IPX is to be used with 3rd party control and/or the IPX Manager Software for complete control of the IPX Series streaming solutions.

Note: Specifications subject to change without notice.   *Refer to User Guide for full specification*
